Professional Summary

MSc International Business Management graduate with experience in operational administration, record management and business process support. Completed a customer satisfaction analysis project using Power BI and Power Query to examine review patterns across product categories, sellers and delivery performance. Skilled in investigating issues, interpreting information and supporting informed business decisions.

Core Skills

Business Analysis & Process Improvement: Problem investigation, process improvement, operational issue analysis, structured documentation

Requirements & Stakeholder Communication: Information gathering, stakeholder communication, issue escalation, action follow-up

Data Analysis & Quality: Data validation, data accuracy, identifying inconsistencies, pattern analysis

Business Tools: Microsoft Excel, Power BI, Power Query, SQL, Jira

Professional Strengths: Analytical thinking, attention to detail, confidentiality, problem-solving, cross-team communication

Professional Experience

Welfare Officer **June 2026 – Present**

SOS Property Management, Bristol

- Maintain accurate resident and operational records, ensuring information is organised and accessible.
- Communicate with colleagues and external organisations to address operational issues and coordinate follow-up actions.
- Manage resident registrations and welfare checks, documenting information and escalating concerns appropriately.

Welfare Officer **July 2025 – May 2026**

Sharp Catering Hotels Ltd

- Eliminated recurring date-formatting errors across 20–50 monthly entries by developing an Excel date-entry tool using the standard DD/MM/YYYY format.
- Applied conditional formatting to identify duplicate unique IDs, enabling potential data errors to be reviewed and corrected.
- Maintained organised site records and communicated operational issues to management to support follow-up actions.

Business Analysis Project

Customer Satisfaction Analysis – Olist E-commerce Dataset

Tools: Power BI, Power Query

Portfolio: rizwanks.vercel.app

- Analysed customer reviews across product categories, sellers and delivery performance to investigate low customer satisfaction.
- Cleaned and prepared five related datasets using Power Query, identifying missing values and repeated review IDs.
- Defined business questions and analytical requirements to guide the investigation.
- Created Power BI charts and tables to compare customer review patterns.
- Found that late deliveries were associated with a higher proportion of low customer ratings compared with on-time or early deliveries.
- Summarised findings, data limitations and recommendations to support potential customer-experience improvements.
